

Community Care

Our company was founded in Longtan District, Taoyuan City, where both our old and new factories are located. The Chairman, known for his generosity, has consistently led efforts to give back to the local community. For many years, he has personally donated on a regular basis to Longtan Qi Zhi Education and Care Institution and local temples. In addition, in 2022 and 2023, the company donated a total of NT\$4 million to the Kenner Autism Foundation to support the construction of the Kenner Manor, a co-living community for individuals with autism in Longtan. In 2023, the company also organized an Employee Family Day at Kenner Manor, allowing employees to visit the facility and better understand how it supports individuals with autism and their families. This initiative strengthened employees' sense of social responsibility and community engagement.

In 2024, the company further extended its support by purchasing Kenner Manor's charity products as gifts for corporate events such as year-end celebrations, the Mid-Autumn Festival, and the Lunar New Year. These gifts were shared with employees, esteemed guests, industry partners, and clients, spreading warmth and goodwill. The total investment for this initiative in 2024 amounted to NT\$308,000.

Support for Local Education:

Our company is actively engaged in industry-academia collaborations with local schools to support educational development. In 2024, we partnered with Century Green Energy Industrial and Commercial Senior High School in Taoyuan City as part of an industry-academia cooperation program, arranging three vocational trainees to receive practical training at our Longtan factory.

In the field of research and development, we collaborated with Chung Yuan Christian University's College of Engineering to advance the "Biomass Gasification and Methanol Synthesis Research and Demonstration Field Construction Plan." In 2024, we invested a total of NT\$300,000 in research and development for this project.

Carbon Reduction and Vocational Training for Inmates:

In recent years, through connections established by a company director who also serves as a professor at National Pingtung University, we have combined green energy, carbon reduction, and inmate vocational training under the theme "Carbon Reduction and Sustainability, Vocational Training for Empowerment." In 2022, we assisted Pingtung Prison in setting up black soldier fly farming equipment, and in 2023, we extended this initiative to Penghu Prison.

To give back to Tainan, where one of our operational sites is located, we donated hydroponic vegetable farming equipment worth approximately NT\$800,000 in 2024. This equipment was used to establish "Huamao Garden" at the Tainan Second Prison, under the Ministry of Justice's Correctional Department. The project follows the same industry-academia cooperation model, helping inmates learn new vocational skills and develop carbon reduction awareness, providing them with more positive opportunities for reintegration into society.
